FR. *Celeri*
GER. *Sellerie*

CELERY

POL. *Selera*
IT. *Sedano*

CULTURE.—Sow seeds in light rich soil, as early as ground can be worked, in drills 8 or 10 inches apart, cover seeds about a quarter of an inch deep, rolling or treading them if ground is dry. When fairly out of seed leaf transplant or thin from 6 to 8 inches apart in the row, and let grow until wanted to plant out. Keep well wet down in dry weather. Set out in July, 6 to 8 inches apart, (press soil firmly against roots), in single row in shallow trenches, having previously worked a good quantity of well rotted manure in bottom of trench. It is well to work thoroughly into the soil under and around the trench a quantity of Our Garden Fertilizer. To raise good celery requires rich soil. Earth up two or three times, taking care not to let the earth get into the heart of the plant.

CULTURE—Sow in August in drills $\frac{1}{4}$ in. deep, 6 in. apart, keep down weeds. Just before winter cover thinly with straw or leaves.

LARGE GREEN CABBAGING,—A small, hardy, salad, used also as a substitute for lettuce, 10c pkt., 30c oz., 75c $\frac{1}{4}$ lb.

FR. *Mais* **CORN** POL. *Kukurydza*
GER. *Mais* IT. *Mais*

(SWEET OR SUGAR)

CULTURE.—Plant in hills 3 ft. apart each way, and five or six kernels in a hill. Hoe often, drawing soil up to stem after first hoeing. Break off side shoots. Make ground very rich. If stable manure is used, it is perhaps best to plow it under. Use broadcast or in the hill Our Garden Fertilizer, worked well into soil. It has been found very beneficial to sow these fertilizers between the rows before cultivating and hoeing the second time.

We have been very careful in selecting the best and sweetest varieties of corn adapted to this section. The list below is arranged in order as they would mature.

	$\frac{1}{2}$ lb.	1lb.	2lbs.	6lbs.

American Mushrooms

CULTURE—Mushrooms are more easily cultivated than many people imagine and may be grown in any room or cellar where the temperature can be maintained at from 50 to 65 degrees. For the beds use a mixture of three parts horse droppings and one part good fresh loam. Before being placed in the bed, let the manure be put in some dry place to sweeten, mixing it thoroughly and turning it three or four times, when the loam may be added. Upon a dry firm bottom, make the bed by spreading a thin layer of the prepared mixture, pounding it firm, and continue this, till the bed is twelve inches thick. Leave it thus for about a week, or until the temperature has subsided to 85 degrees. Then make holes about ten inches apart, and put in each a piece of spawn about the size of an egg. Press the spawn firmly into the compost about two inches, leaving the top uncovered to allow the excess of heat and moisture to pass off without injury to the germs. After ten days, fill the holes and cover the whole bed with two inches of fresh loam, and over this place a few inches of straw. If the temperature is right, mushrooms will appear in six or eight weeks from the time of spawning. The bed will continue bearing from four to six weeks. If the surface of the bed becomes dry at any time, it should be moistened freely with water at a temperature of 90 to 100 degrees.

Our stock of spawn is replaced a number of times during the season and is giving excellent results.

CULTURE.—For Peas, light dry soil is best. Sow as early as ground can be worked, and again every ten days for succession. Peas may be sown as late as August 15th. Medium and late Peas must be planted early. Early Peas may be planted early or late, and the extra early very late. Sow in single or double rows from 4 to 6 feet apart, according to variety, and about an inch apart in the row and 4 in. deep. Hoe often, keep ground clean and fine. Most Dwarf Peas will bear better if bushed enough to keep them from the ground. If the pea louse attacks the vines, spray every day with clear water of the same temperature as the atmosphere, using force.

LOWE BROTHERS HIGH STANDARD HOUSE PAINT keeps your home's appearance up and its depreciation down. What's more, it costs less to use because—

It covers more square feet of surface per gallon than cheap paint.

Its long-lasting protection saves you the expense of repainting so often.

It spreads so easily and evenly that it actually reduces the cost of labor.

The fresh, modern beauty of HIGH STANDARD colors adds new styling to the exterior of your home.

Come in today—see Lowe Brothers Pictorial Color Chart and let us give you current, practical advice on STYLING WITH PAINT.

USE A GOOD BRUSH

The excellence of a paint finish depends greatly on the brush used. Cheap, bristle brushes often contain dirt and loose hairs which are brushed into the paint film and the result is an unsightly job.

For the difference it makes, a good brush is a good investment.

In selecting a paint brush, be sure to select one that is large enough for the job.

A brush too small will cause lost time in application.

SHINGLE STAIN

Lowe Brothers Shingle Stain penetrates and seals the surface of shingles and rough sawed lumber. It is weather resistant and keeps out decay-starting moisture.

Either old or new surfaces may be beautified and protected with Shingle Stain.

In staining old work, simply brush on two coats of the Stain.

These stains may also be used on rough sawed wood, fences, trellises, arbors and similar surfaces.

But most important, the amazing durability of PLAX to resist wear, weather and abuse has been proved in thousands of homes from coast to coast. And free flowing PLAX is economical to use for all enameling. Come in today and let us show you the exciting PLAX colors and give you free advice on Modern Color Styling with paint.

OIL STAIN

The beauty of natural wood grain is enriched with Lowe Brothers Non-Fading Oil Stain. It brings out, and preserves the beauty of the wood grain. Since it is made of permanent pigments, it retains its color indefinitely.

Non-Fading Oil Stain brushes on easily and dries quickly. It does not raise the grain, thus the wood surface is as smooth after application as before.

Use Non-Fading Oil Stain on either hard or soft grain woods in homes, offices and public buildings.

THE LEADER SINCE 1867

In 1867 William Louden invented the World's first hay carrier. Since that memorable date Louden has introduced practically all the new items that go to make up a modern barn.

VENTILATION

Complete systems for all farm buildings. Both electric and gravity. Keeps your animals healthy—keeps your building from rotting. Glad to give quotations.

WATER BOWLS

The best investment a dairyman can make! Increased milk soon pays for them. Two modern, improved bowls from which to choose. Louden introduced the first automatic bowl.

LITTER AND FEED CONVEYORS

A complete and modern line of litter and feed carriers and trucks. Cuts feeding and "cleaning out" time in half. Rigid or wire tracks. Wide range of prices.

STALLS AND STANCHIONS

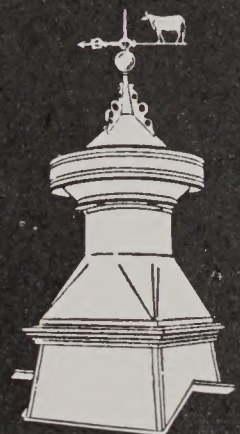

Double, single, side post, lever, go-right, and tubular arch stalls. Wood-lined, adjustable, tubular, u-bar stanchions. A most complete selection. Get our prices.

HAY TOOLS

Louden pioneered hay unloading tools. Recently introduced the celebrated "Iron Claw" fork. Also fork and sling cars, pulleys, track. A complete line.

PLAN SERVICE

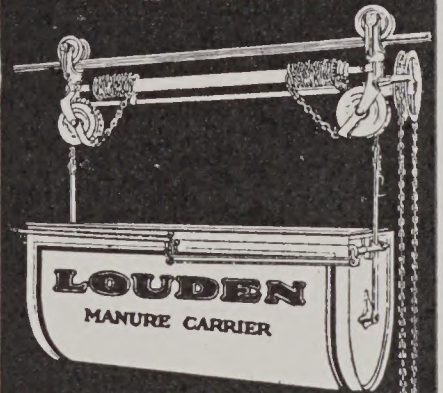

Thousands of floor plans and cross sections. Several barn experts. Let Louden plan your new or modernized buildings. Save time, worry and money. Have a modern, well planned barn.
